

S.O.S. Guitar Tuner

With Strobe-On-String Tuning Technology

The revolutionary Planet Waves S.O.S. Guitar Tuner* pulses two out-of-phase LED light beams directly onto the vibrating string. When the string is out of tune, the two lights will visually dance on the string being tuned. As you approach in-tune status, the movement slows down and eventually stops when you are perfectly in tune. This revolutionary visual tuning system enables precision tuning in silent or noisy environments, without the need for audible sound or sensing of any kind.

› **Ergonomic pick-sized design** allows you to pluck the string and shine the LED beam easily.

› **Light-based tuning** requires no audible input or complex sensing circuitry.

› **Precisely tune** in dark or noisy environments.

S.O.S. Guitar Tuner Quick-Start:

1. Select string to be tuned with Data Wheel.
2. Pluck the string.
3. Shine the LEDs on the string near the 12th fret.
4. Tune the string until the movement of the light projected on the string slows to a stop.
5. When the movement of the light stops, you're in tune!

- › Auto power-off to conserve battery life.
- › Runs on 1 CR1620 battery (included).
- › Multi-language instruction booklet enclosed.

**Only for 6-string guitar in standard tuning.*

The S.O.S. tuner strobe lights may be difficult to see on some clear nylon classical guitar treble strings.
